

## **AEROSPACE LOCKING DEVICES**

### AEROSPACE FASTENERS DISTRIBUTOR

Aircraft Locking Devices are sophisticated mechanical fasteners used in a wide variety of aerospace applications, including critical flight control and landing gear systems. These parts provide a positive lock to prevent rotation in mechanical linkages or actuator systems while simultaneously allowing for linear adjustment. Locking action is obtained via a keying device that locks a shaft to a keyway in a rod end terminal and is secured by a jam nut that is then attached to the locking device with safety wire.

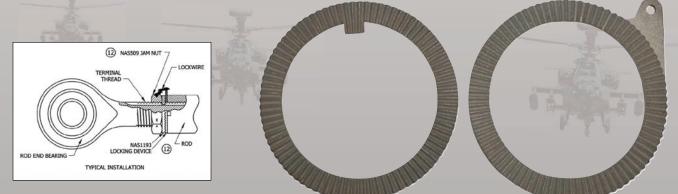

FDI carries a full range of positive indexing locking devices that includes an array of sizes, finishes, and heat treatments.

## STANDARD LOCKING DEVICES

NAS1193	
	We also stock the jam nuts (in Stainless Steel Only)
MS14198	used in conjunction with the locking devices including:
AS14227	NAS509 and NAS1423
NAS559	
JSF23	
M81935 (AS81935/3, MIL-B-	81935/3)
EN2546	ATTIMA ATTIMA

The NAS1193 Positive Index Locking Device functions as a washer with a locking tab, but is made up of two halves with serrations on one side of each. The serrations can allow for very fine linear adjustment of a mating rod end in some applications. Parts are investment castings, material is 17-4 per AMS 5355 or AMS 5343.

FDI stocks the entire series of NAS1193 locking devices, along with similar parts with metric dimensions and special customer designs.

# **AEROSPACE LOCKING DEVICES**

### AEROSPACE FASTENERS DISTRIBUTOR

Single washer style locking devices are produced in a wide variety of materials, including 17-4, 15-5, 4130 Alloy and Inconel 718.

The NAS559 design is a locking key that seats in the keyway of the rod end and under the threads of the jam nut. In a typical actuator application the actuator rod is slotted on the end to accept the lug end of the locking key. Thus, the keyway of the rod end and a slot of the actuator piston rod are secured by the key. Finally, a jam nut holds the key securely in place after being properly torqued and correctly safety-wired.

These locking devices are stocked in standard sizes, as well as, with similar metric dimensions, or can be custom manufactured to your specific needs upon request.
